

# EGG GENIUS

**This technical device controls and monitors the temperature of your EGG and sends it to your smartphone or tablet. The EGG Genius ensures a constant airflow enabling you to continue to cook at a constant temperature.**

You will get a notification when the EGG temperature is too high or low and also when your cook is finished, ready for sitting down to eat. You can even inspect the statistics of your previous EGG sessions.

Quickly and easily reach your desired cooking temperature as the blower increases to fan the lighted charcoal.

The variable speed blower automatically adjusts the blower speed to optimize the set temperature.

Automatically lowers the temperature to keep your food warm after the cook is complete.

Detects the sudden temperature drop from opening the dome and turns the fan off temporarily to avoid over-stoking the fire.

One Year Limited Warranty.
