Befestigung auf dem Boden

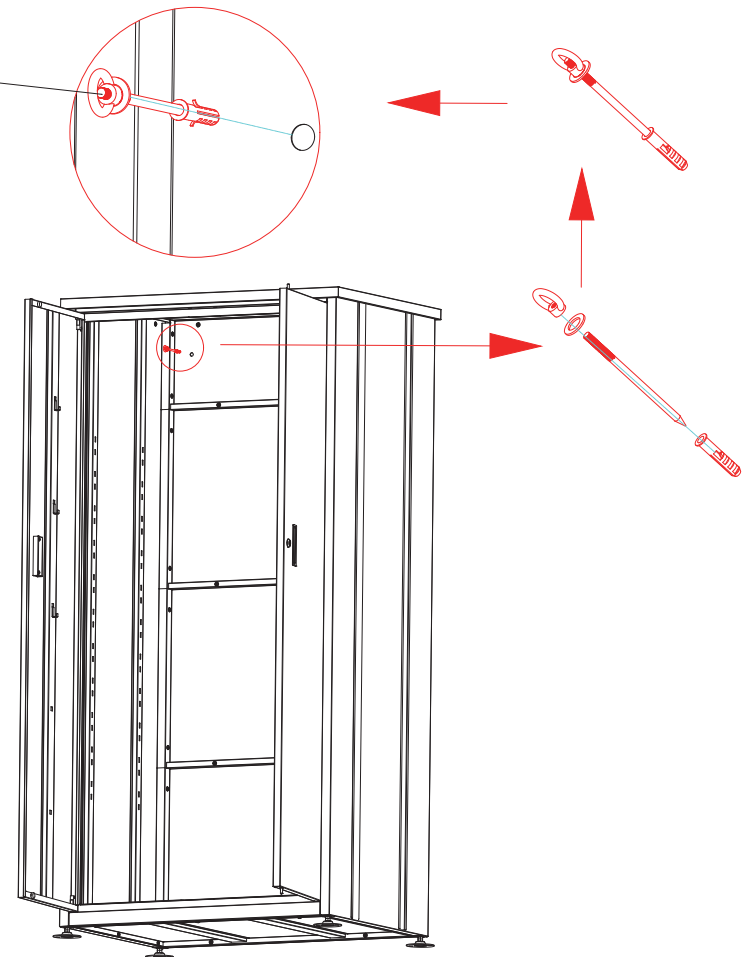

Nachdem Sie den Schrank entsprechend Ihrer Anforderungen an der gewünschten Position platziert haben, justieren Sie die verstellbaren Füße an der Unterseite, bis die linke und rechte Tür waagrecht stehen.

Anschließend bohren Sie mit einem 10 MM-Bohrer die Befestigungslöcher in den Boden (Bohrtiefe > 60 mm).

Befestigung an der Wand

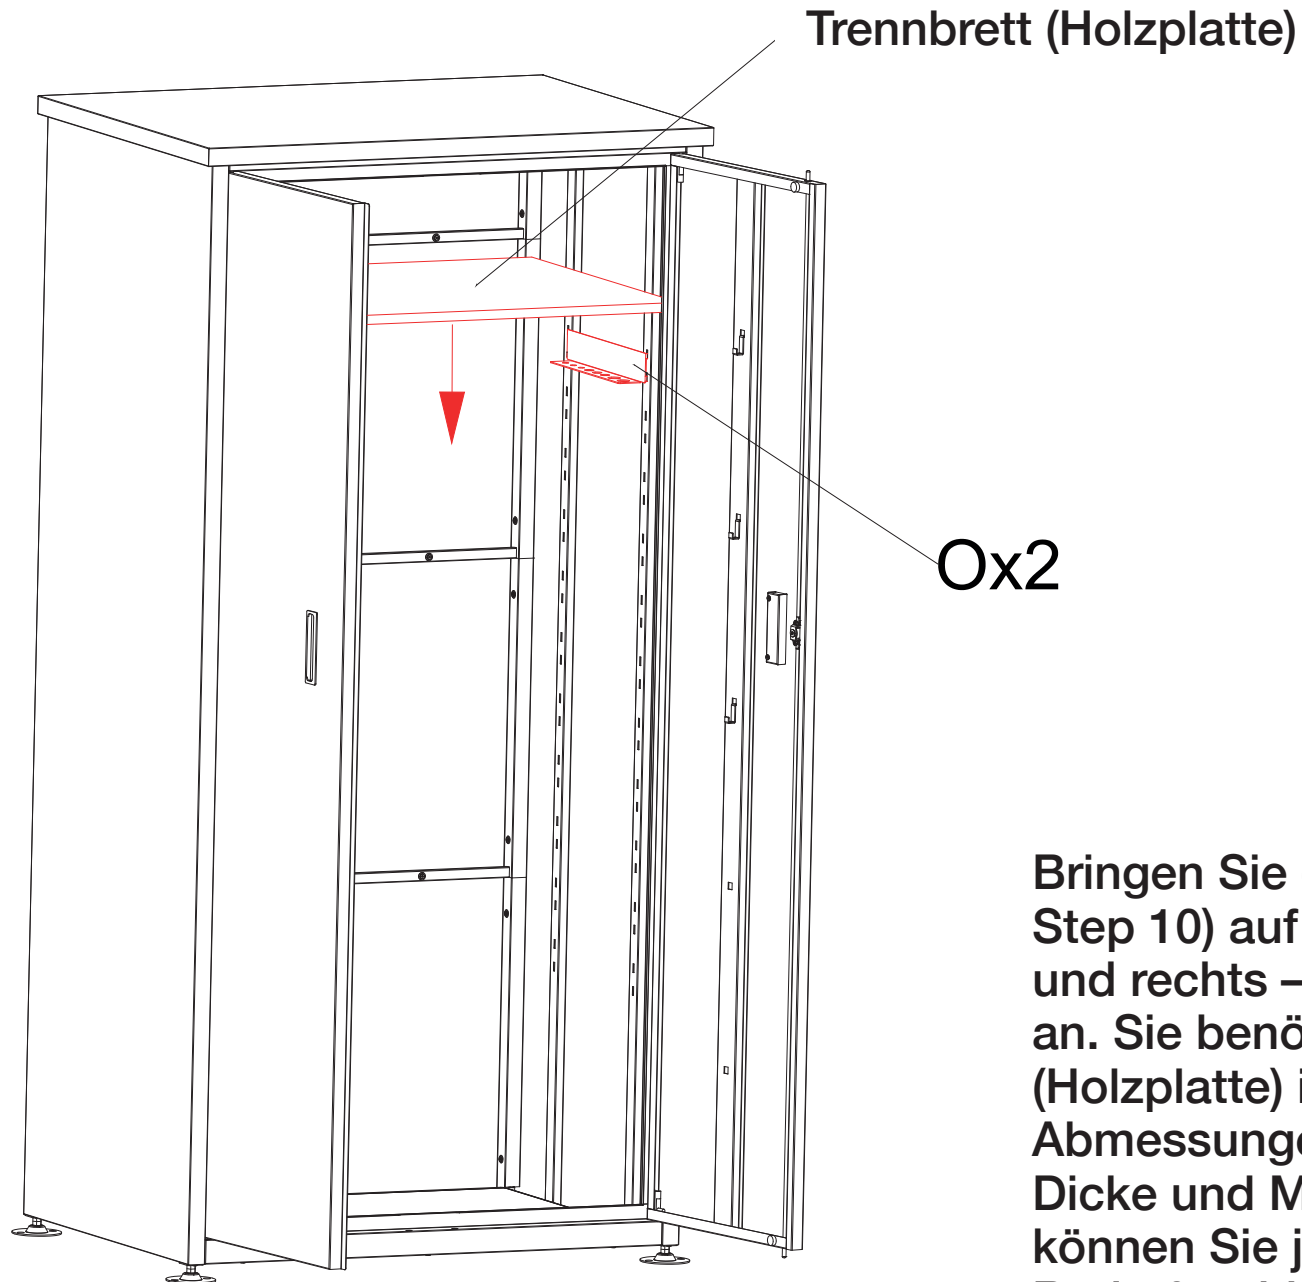

2x2

Nachdem Sie die Werkzeugbox entsprechend Ihrer Anforderungen an der gewünschten Position platziert haben, justieren Sie die verstellbaren Füße an der Unterseite, bis die linke und rechte Tür waagrecht stehen.

Anschließend bohren Sie mit einem 6-mm-Bohrer die Befestigungslöcher an der Rückseite (Bohrtiefe > 60 mm).

DIY OPTION

Bringen Sie das Teil „O“ (wie in Step 10) auf beiden Seiten – links und rechts – in derselben Höhe an. Sie benötigen ein Trennbrett (Holzplatte) in folgenden Abmessungen: 560 × 835 mm. Dicke und Material des Holzes können Sie je nach individuellem Bedarf wählen.
